

MRT's Environmental Policy

In our business of manufacturing low-carbon steel enclosures and wires, we set a goal to prevent, reduce and eliminate, whenever possible, the environmental impact generated by our processes.

We resolutely work to achieve economic growth compatible with respect for the environment, which ensures a prosperous and healthy environment for all future generations.

The framework for action to achieve our aim is:

- To integrate environmental requirements into the productive system, ensuring efficient use of natural resources and energy.
- To carry out management and continuous improvement programs (EMS, 5S, audits and investigation of environmental incidents) that include setting and reviewing environmental objectives and targets.
- To identify the applicable legal requirements and fulfil the legal obligations, as well as the voluntary commitments and agreements made by the organisation.
- To encourage recycling and energy savings.
- To promote waste minimisation in relation to the main raw materials we consume.
- To maintain open and transparent dialogue with the Government.
- To enhance and improve environmental performance by setting indicators to assess the level of efficiency of our actions.
- To cultivate the environmental commitment of everyone connected with our business.
- To document, implement and keep this Policy up to date.
